

8x8 Voice for Microsoft Teams

Give your Teams users global calling plans with 8x8 Direct Routing

Organizations around the world empower employees to collaborate with Microsoft Teams. Direct Routing from 8x8 supercharges Teams with enterprise telephony and PSTN calling capabilities.

8x8 Voice for Microsoft Teams is a cloud-based direct routing service that enables Teams users to make and receive calls over the public switched telephone network (PSTN) using the native Teams desktop, mobile or web app.

It removes administrative complexities of setting up on-premises equipment, SIP trunks or end-user software, and enhances the Teams user experience through better call quality, advanced phone features and choice of cost-effective calling plans to suit individual needs.

Organizations also benefit from rapid deployment and better commercial licensing, including unlimited local and international calls to 47 countries, full PSTN replacement across 42 countries, and DID plus toll-free numbers in more than 120 countries.

8x8 Voice for Microsoft Teams includes native contact center capability, call recording, comprehensive analytics, and integration with dozens of common business apps.

8x8 Voice for Microsoft Teams gives your organization all the benefits of a global enterprise communication solution, saving you time and money without the hassle of managing a communications infrastructure or complicating the Teams user experience.
